EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: On page 1, line 2 of the specification, the following text was inserted: --This application claims priority to Swedish Patent Application 0100365-6 filed on 2/06/2001 and United States Provisional Application 60/270,046 filed on 2/20/2001.--

2. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:
Non-initialed and/or non-dated alterations have been made to the oath or declaration. See 37 CFR 1.52(c).

3. The following is an examiner's statement of reasons for allowance: The closest prior art to independent claim 16 is Winqvist (see previous office action) and Smart et al (cited here for the first time). Winqvist teaches a number of aspects of the invention, but does not teach the presence of a processing unit for predicting a concentration of ozone. Winqvist is drawn to the monitoring of the freshness of milk and one possessing ordinary skill in the art would not have

been motivated to configured said device for the prediction of ozone. Smart teaches pulse voltammetry of ozone, which would read on a number of the elements of the claimed invention. However, Smart does not suggest the presence of any processing unit for performing multivariate analysis nor would it have been obvious to one possessing ordinary skill in the art to configure Smart with such a processing unit for performing multivariate analysis.
